Advanced EMR Solutions
For Dialysis Units & Access Centers

Dialysis Manager™ EMR Application for Dialysis Units

Electronically store, use, manage & archive comprehensive dialysis data

- Patient demographics
- Physician order entry & approval
- Dialysis flow sheets (HD & PD)
- Meds, labs & dialysis treatments
- Patient hospitalization detail
- Dialysis access management

- Dietitian assessments, reviews & plans
- Anemia management
- Bone disease management
- Social worker assessments & plans
- Comprehensive care plan
- Physician notes & report templates

Powerful Reporting

- Generate reports at physician, facility & patient levels
- Compare performance to K/DOQI guidelines
- Set desired parameters for various reports (e.g., thrombosis count, catheter prevalence, Kt/V)

Improve Care

- Identify & resolve access complications earlier to reduce hospitalization
- Streamline data capture & organization
- Optimize work flow & communications
- Automatically prepare monthly report to Networks in required format
- Access patient information anytime, anywhere

Measure Performance

- Improve patient outcomes & quality of care
- Demonstrate quality to others (e.g., CMS pay for performance)
- Improve feedback to healthcare professionals

Easy to Use

- Move quickly through application with user-friendly navigation
- Save time with quick & easy data entry screens with drop-down menus
- Record machine, meds & lab data
- Capture Transonic & other surveillance data
- Provide necessary data to billing & other applications
- Eliminate search for scattered, paper-based patient information
- Enter data once — access data forever

Dialysis Manager, combined with your medical skills, can help you

- Enhance your reputation — reduce complications & improve quality of patient care
- Improve physician communication, decision-making & performance
- Reduce operating costs & improve efficiency
- Accelerate & increase revenues
